

My son is a long distance Big Rig truck driver-driving all over the USA & into to Canada. He needs (as do all Truckers) nationally available weather and traffic reports to find the safest routes he can and to avoid dangerous weather, such as the tornados we have had in the Midwest this last few weeks). This service is only available such radio services as XM Radio. This is a very necessary service as at least 80% of all goods travel by truck. Thank you.
